

Υπολογιστική Όραση

2η σειρά ασκήσεων

Άσκηση 2

$$\alpha=2, \beta=6, \gamma=4, \delta=9$$

$$\alpha) (\beta f^T x + 3)' = (\beta f^T x)' + (3)' = \beta f + 0 = 6f$$

$$\begin{aligned} \beta) (\gamma \|x\|^2 + 2f^T x + x^T(D+\beta I)f + \delta f^T D^T f)' &= \\ &= (\gamma x^T x)' + (2f^T x)' + (x^T(D+\beta I)f)' + (\delta f^T D^T f)' = \gamma 2x + 2f + (D+\beta I)f + 0 = \\ &= 2\gamma x + 2f + (D+\beta I)f = 8x + 2f + (D+6I)f \end{aligned}$$

$$\gamma) \text{ Πρέπει: } g'(x) = 0 \Rightarrow$$

$$(1/2 x^T(D^T D + \alpha I)x)' + (f^T x)' + (10)' = 0 \Rightarrow$$

Έστω $D^T D = A$, τότε A : συμμετρικός

$$1/2 * 2(D^T D + \alpha I)x + f + 0 = 0 \Rightarrow (D^T D + \alpha I)x = -f \Rightarrow$$

$$x = (D^T D + \alpha I)^{-1}f \Rightarrow x = (D^T D + 2I)^{-1}f$$
